1. INTRODUCTION.................................................................1-29

1.1. Introduction
1.2. Mouth Dissolving Tablets (MDT)
   1.2.1. Advantages of Mouth Dissolving Tablets
   1.2.2. Essential Requirement of MDTs
   1.2.3. Important criteria for excipients used in the formulation of MDTs
1.3. Challenges in formulation of MDTs:
   1.3.1. Taste masking of drugs
   1.3.2. Quick disintegration of tablets
   1.3.3. Industrial Adaptability
   1.3.4. Patient compliance
1.4. Taste Masking
   1.4.1. Taste Masking Technologies
   1.4.2. Evaluation of taste masking
1.5. Manufacturing Technology for MDTs
1.6. Patented technologies for mouth dissolving tablets
1.7. Comparative study
   1.7.1. Mouth disintegrating tablets
   1.7.2. Mouth dissolving tablets
1.8. Current scenario in marketed MDTs

2. LITERATURE SURVEY.........................................................30-39

3 RESEARCH ENVISAGED AND SELECTION OF DRUG CANDIDATE..40-47

3.1. Objective of the Study
3.2. Scope and relevance of the present work
3.3. Plan of work
3.4. Selection of drug candidate
   3.4.1. Description of Levocetirizine diHCl
      3.4.1.1. Mechanism of Action
      3.4.1.2. Pharmacodynamics
      3.4.1.3. Pharmacokinetics
      3.4.1.4. Drug Interactions
      3.4.1.5. Dose
3.4.2. Description of Cefixime
   3.4.2.1. Mechanism of Action
   3.4.2.2. Pharmacodynamics / Pharmacokinetics
   3.4.2.3. Drug Interactions
   3.4.2.4. Dose

4. PRELIMINARY STUDIES ...............................................................48-71
   4.1. Objective
   4.2. Materials
   4.3. Equipments
   4.4. Methodology
      4.4.1. Characterization of Drugs:
      4.4.2. Taste Masking of Levocetirizine
      4.4.3. Solubility Enhancement of Cefixime
   4.5. Evaluation
      4.5.1. Characterization of Complexes:
      4.5.2. Evaluation of Taste Masking
      4.5.3. Phase Solubility Studies
   4.6. Result and Discussion
      4.6.1. Characterization of Levocetirizine diHCl:
      4.6.2. Characterization of Cefixime Trihydrate:
      4.6.3. Characterization of Complexes
      4.6.4. Results of taste masking of levocetirizine diHCl
      4.6.5. Phase Solubility Study

5. FORMULATION AND EVALUATION.............................................72-97
   5.1. Objective
   5.2. Materials
   5.3. Equipments
   5.4. Preliminary formulation trial
   5.5. Excipients Screening Trials
   5.6. Formulation of mouth dissolving tablets (MDTs)
      5.6.1. Formulation of MDTs of Levocetirizine by Sublimation Method
      5.6.2. Formulation of MDTs of Levocetirizine by Effervescent Method
      5.6.3. Formulation of MDTs of Cefixime by Effervescent Method
   5.7. Evaluation
      5.7.1. Hardness, Friability, Weight variation, content uniformity:
      5.7.2. In vivo Mouth Disintegration Study
      5.7.3. In vitro disintegration time
      5.7.4. In vitro Drug Release Studies
   5.8. Result and Discussion
      5.8.1. Hardness, Friability, Weight variation, content uniformity:
