Acknowledgments

I completed this thesis work with guidance, help and support from many people directly or indirectly; I would like to thank them.

First of all, I would like to express my sincere gratitude to Prof P C Saxena for his invaluable guidance, encouragement and support in every stage of my research work. This thesis represents a great deal of time and effort not only on my part, but also on the part of my supervisor. He provided many opportunities for learning: from understanding research papers, generating ideas and turning them to implementation, getting through inevitable research setbacks, to publishing research papers in International Journals and completing the thesis. What I learnt from him would provide me with lifetime benefits.

I am extremely thankful to Prof H P Dikshit, Vice Chancellor, IGNOU who always believed in me. He entrusted the daunting tasks, I thought would not be possible to achieve. But he provided the help and support to complete these tasks. He assigned me the pioneer work of implementation of Edusat based terminals in 131 locations all across India. Without his belief, I would have never got the opportunity to complete and work on first Indian satellite based IP network dedicated for education.

I am grateful to Dr V S P Srivastav, Director, Computer Division, IGNOU, for introducing me to Prof P C Saxena and providing all the support in terms of IT resources required for the research work including the simulation setup. I am also thankful to Dr R C Sharma Dy. Director, RSD, IGNOU for providing new ideas to link part of this research work to distance education.
I am indebted to Mr Yashpal Bhaskar and Mr Arun Verma. Mr Yashpal Bhaskar has always been there to convert my ideas into figures during the research period and also to format the thesis. Mr Arun Verma assisted me in typing the research papers and thesis. I would also like to thank all my colleagues especially Mr K. Guruswamy at Computer division and University who directly or indirectly supported for my Ph. D.

I am grateful to my parents for their love and encouragement as well as being a great role model in my life. My in-laws have always supported me in pursuing this research work. Without their encouragement, I would not challenge myself and pursue new goals again and again. I especially thank my sister, Dr Madhu Jasola, for the deep discussion along the way. Her creative idea, quick thinking, and smart personality inspire me through all these years. My brothers and their families have always been supporting me to pursue this research work.

Finally, I want to express my deepest feeling to my wife, Nanny Jasola, who contributed significantly to the completion of this thesis. She is emotionally supportive while pushing me to get things done. She does lots of work so that I can concentrate on my research. I want to thank her wholeheartedly for her support.

Last but not the least; I would like to thank Dr. R C Poha, SCSS, JNU for introducing me to the School and the research work. Though there is not alternative to sincere efforts and sustained hard work, no work can be completed without the blessings of elders and good wishes of friends. I am grateful to all my relatives, friends and all well wishers who have remained concerned about my thesis and have co-operated in every possible way.
