# Table of Contents

List of Figures .................................. i  
List of Tables ................................... iii  
List of Acronyms ................................ iv  
List of Publications .............................. vii  

## 1. Introduction

1.1 Background and Motivation .................. 01  
1.2 Problem Statement and Scope of Research Work .... 04  
1.3 Research Objectives ........................ 06  
1.4 Organization of the Thesis .................... 07  

## 2. Literature Survey

2.1 Introduction to Mobile Computing .......... 08  
2.2 Broadcast Systems .......................... 11  
2.3 Methods of Data Scheduling ............... 14  

2.3.1 Push-Based Data Scheduling ............ 14  
2.3.2 On-Demand Data Scheduling ............ 18  
2.3.3 Hybrid Data Scheduling .................. 22  

2.4 Air Indexing ................................ 25  
2.5 Data Caching and Cache Consistency ........ 32  

2.5.1 Classification of Cache Invalidation ..... 35  
methods - Mobile client cache consistency  

## 3. Multicast Support For Effective Cache Consistency in Mobile Environment 48
3.1 Mobile Device characteristics

3.2 MCAODV – An Enhanced multicast flow control protocol

3.2.1 Description

3.2.2 Support for Flow Control Operation - Retrieving Flow Information

3.2.3 Scenario Creation and Scheme Evaluation

3.2.4 UML Diagrams

3.2.5 Formulation of Channel Assignment Function

3.3 Experiments And Results

3.3.1 Design of test cases and scenarios

3.3.2 Constant Bit Rate (CBR) Multicast Sources

3.3.3 Variable Bit Rate (VBR) Multicast Sources

3.3.4 Comparison between proposed MCAODV and existing protocol

4. Data Transmitting Agent based strategy for Effective Cache Consistency

4.1 Architecture of Multicast-Data Dissemination Model Using Data Transmitting Agent

4.2 DTA - based Multicast Data Dissemination for Effective Cache Consistency

4.3 Invalidation Report Generation and Query Request

4.4 Cache Management at Base Station, DTA and Mobile Hosts

4.5 DTA - Roaming

4.6 Query Description

4.6.1 Flow Chart
4.6.2 Base Station Algorithm

4.6.3 Client Algorithm

4.6.4 DTA Algorithm

5. Performance Analysis Experimental Results

5.1 Description of Scenario for Data Transmitting Agent based Multicast strategy

5.2 Maintaining Cache Consistency between DTA and Mobile Hosts
   5.2.1 Experimental Configuration

5.2 Performance Evaluation

   5.3.1 Comparison of the AS, SACCS, ADBC with the proposed MDD-DTA strategy

6. Cache Management and Replacement

6.1 Cache Management Issues

6.2 Semantic Neural Network Cache Replacement Policy
   6.2.1 Query Processing
   6.2.2 Cache Replacement Policies
   6.2.3 ERBF-FAR Scheme

6.3 Experiments and Results

7. About the Simulator

7.1 Introduction

7.2 NS2 Simulation Steps
   7.2.1 Creating Scenarios
   7.2.2 Packet Tracing

7.3 NAM - The Network Animator
8. Conclusion and Future Scope
