ACKNOWLEDGEMENTS

First of all, I would like to thank the Supreme Power, the God, who always guided me to work on the right path of life, since born for each moment and blessed with his support to pave the path for every success. Without his grace, this would not have been possible. This thesis is the end of my journey in completing my Ph.D. It is a pleasure to convey my gratitude in my humble acknowledgment to all those people whose contribution in assorted ways helped to complete my research.

At this moment of accomplishment, I would like to record my gratitude to my advisor Dr. Surinder Singh, for his supervision, advice, and guidance from the very early stage of this research as well as giving me extraordinary experiences throughout the work. The joy and enthusiasm he has for his research was contagious and motivational for me, even during tough times in the Ph.D. pursuit. I am also thankful for the excellent example he has provided as a professor and as a human being. Above all and the most needed, he provided me unflinching encouragement and support in various ways. I am indebted to him more than he knows.

I am debtful to Dr. Amit Roy, Director, IUAC, New Delhi, Dr. Sundeep Chopra, Senior Scientist, IUAC and Accelerator User Committee for providing me a chance to use beam time facility. The gamma irradiation facilities provided by JNU, New Delhi, are thankfully acknowledged. A very special thanks goes out to Dr. S. P. Lochab, Scientist, IUAC, New Delhi, for his thorough encouragements compounded with his most humanitarian behavior.

I am especially grateful for conversations with Dr. Rajesh Kumar, Associate Professor, University School of Basic and Applied Sciences, G.G.S.I.P University, Delhi, and his extensive discussions around my work. He provided me with direction and valuable advice. It was though his, persistence understanding and kindness that I completed my research work. I doubt that I will ever be able to convey my appreciation fully, but I owe him my eternal gratitude.

Dr. Shyam Kumar, Professor, Kurukshetra University, Kurukshetra, Haryana, deserve my sincere expression of thanks for his help and support to provide me with FTIR and UV-Vis spectroscopies. Equally supportive and important, I must also acknowledge Dr. Lakhwant Singh, Head, Department of
Physics, GNDU, Amritsar, for providing me experimental facilities to carry out this work.

My time at university was made enjoyable in large part due to many friends that became a part of my life. I offer my sincere thanks to my sweet friends Amanpreet and Chanchal. They have helped me stay sane through these difficult years. Their support and care helped me to overcome setbacks and stay focused on my research. Special thanks to my friends Rajni Kamboj and Sukhnandan for lending me a supporting hand whenever I needed.

Above all, I would like to thank my parents (mummy, mama and papa ji) for always believing in me and teaching me that any goal I set forth is attainable. Their support, love and prayers helped me through the time of this degree and I can never thank them enough. I would like to thank my brothers Amandeep, Harmanjot, Jagbir and Pawanjit Cheema and sisters Gurpreet, Navkiran and Prabhjot for providing me assistance whenever needed and supported me in all my pursuits. My part of thanks also goes to my aunt (masi ji) and their family for their moral support and hospitality during these days. My father unfortunately died when I was too young and whom I miss terribly. I wish his soul roots in peace and solace in the heaven. It is to him that I dedicate this work. And most of all, for my loving, supportive, encouraging and patient husband Rubrinder Singh Sandhu whose faithful support during all stages of this Ph.D. is so appreciated. Thank you.

(Ramandeep Kaur Dhillon)
