Search Engines: Tools For Exploring The Internet

Swapan Kumar Dasgupta
Central Library, Kalyani University, Klyuniv @giasc101. vsnl.net.in

Abstract

A software package for searching a particular information or topic from the vast amount of information available in INTERNET is called a search engine. The common search engines are Altavista, Webcrawler, Yahoo, Lycos, Infoseek, Aliweb. The author provides a list of search engines in INTERNET covering wide areas of interest and then brief description of URLs. After mentioning about the role of the INFLIBNET in modernising the university libraries and in improving the on-line access by creating its web page, the author says that in order to improve upon the education and research infrastructure of the country, some changes are necessary in our present thinking and approach.

Introduction

Internet is a global mesh and may be called a large repository of information put up by the user. Searching in a particular information or topic of interest, is an intricate task due to the fabulous size of Internet, and vast amount of information, and its many possible methods of storage. A software package for this purpose is called a search engine.

Common Search Engines

The common WWW search engines are Altavista, Webcrawler, Yahoo, Lycos, Infoseek, Aliweb.

Some of these sites may be very busy, then the user has to try for another site, or may press G key for going to another URL. People are not aware that, netsurf can be of various ways. They may say it seems to be time consuming, but the fact is it is free from traditional constraints of time and space.

Lots of interesting materials are available on effective teaching strategies and family learning, educational research, publication, professional development resources, up-to-date bibliographies, current research summaries, specialised searches, valuable guide to education, commerce, and political resources, and much more on the Internet.

**The role of INFLIBNET**

INFLIBNET under UGC has initiated modernisation of university libraries, and is trying to provide the in house information from libraries in different parts of the nation. The INFLIBNET plans to continue improving on-line access by creating a Web Home Page for about 225 Universities/instituitions, that the web user can have access information form their desktops through Search Engines.

**Conclusion**

Some changes are necessary on current thinking, as because information age have opended up vast new opportunities for Library Information Services in India. It will greatly improve the education and research infrastructure; there will be trained network experts as well as experienced network and users. It will also help in gearing-up education, research and economic development of India in the 21st century.
