Web Enabling : New Trends

Purushothama Gowda

Mahesh Mudhol

As -and when the number of resources grows, complexity in organizing the static pages will also grow and it becomes very unfriendly to the end-users. In this situation one may have to think about database driven WebPages that would help the end users to interact with the stored information to retrieve the required information. The web databases have become very popular in the Internet world for organizing the Information resources. Library & Information centers can effectively utilize this web technoigy for improving as well as delivering new services. This paper discusses the tools and the techniques of the 'Database Web' connectivity in brief.
