ABSTRACT

In the present era of Information Technology (IT), extensive efforts are made for the resource sharing activities at various levels. Resource sharing through networks is more popular in the area of Library & Information Services (LIS). Activities of resource sharing are increasing and more effective & efficient services are provided to the user community with the help of IT. Networks play an important role in LIS and help in achieving the economy in dissemination of information. Internet has proved to be a boon and intranets are gaining importance in sharing the organisational resources. The present paper deals with a case study of establishment of intranet at NCL (National Chemical Laboratory) and benefits acquired by the staff of the organisation.
