## **ABSTRACT**

Library computer network security faces many challenges. Library network security must be achieved without any compromise. This paper presents few important guidelines that may help tremendously in improving the secure working of the library computer network. Attempts are being made worldwide with regard to the library network security so as to achieve a very good library network setup. A good library network system should be able to meet three major objectives, namely, data availability, confidentiality, and data integrity. This paper discusses the objectives, plans and tips for library computer network security.
